## ADVANCED AIRCRAFT COMPANY

**Describe your company in five words.**

Manufactures long endurance multi-rotor UAS

## **What are your biggest goals in the field of unmanned systems over the next few years?**

- 1) To shake up the multi-rotor market with a long endurance multi-rotor that can fly 6 to 8 times longer than battery powered multi-rotors.
- 2) To develop the NASA Greased Lightning UAS technology into a commercialized product. This technology is unique because it is the first VTOL aircraft to achieve the aerodynamic efficiency of a conventional fixed wing aircraft. Thus, no compromises, VTOL and the performance of a fixed wing.

## **Where do you see the industry going in the next few years?**

Today, I see the UAS industry in a similar place as the computer industry was in the early 1990s. The computer industry in the 1990s, went from few households having a computer to nearly every household having a computer. The UAS industry is still very early in its growth curve and over the next 10 years we will see a democratization of UAS that will interface with the majority of the population on a daily basis.

## **What's your organization's focus over the next three months?**

AAC is currently focused on our beta program for the HAMR UAS. We are currently seeking early adopters who want to buy or lease HAMR UAS at very competitive pricing.

## **What makes AUVSI membership attractive to your organization?**

The networking opportunities that AUVSI provides in the unmanned systems industry.
